

# Prior Work Communication: Measuring Oversight (Ganjihal and Singh, 2026)

**Custody record, v1.** September 24, 2026. Sent by Basil C. Puglisi, MPA, basilpuglisi.com, from his LinkedIn account.

**Work addressed:** Ganjihal, S. R., and Singh, S. (2026, August 26). Measuring oversight: The Oversight Quality Index and Cognitive Readiness Score for AI-augmented decision systems. SSRN abstract [7376519](#). The paper is one of five companion papers in the authors' Cognitive Decay Paradox research program, whose framework paper was posted in June 2026 (Zenodo, doi:10.5281/zenodo.20512140, also SSRN abstract 6875782).

**What this record shows.** On September 24, 2026, one message was sent through LinkedIn to each author, to Savneet Singh at 10:21 a.m. and to Sanjeev Rao Ganjihal at 10:23 a.m. Eastern Time. Each message identified dated published work on the same gap, human oversight of AI that regulation mandates and nobody measures, set out that work in order of publication, and noted that the sender's Verified AI working paper cites Measuring Oversight. The reference list of Measuring Oversight, 33 entries as retrieved on September 24, 2026, does not include the works listed below. The screenshots that follow were captured by the sender at the time of sending, and a SHA-256 digest of each source file is listed in the exhibit index.

This record claims the order of publication only. No derivation is claimed in either direction, and the measurement of human oversight as a whole draws on decades of human-factors research that Measuring Oversight itself reviews.

## Communication log

| Recipient            | Byline on the paper                  | Channel                                                                                                 | Sent (Eastern Time)       | Subject line                                         | Exhibits |
|----------------------|--------------------------------------|---------------------------------------------------------------------------------------------------------|---------------------------|------------------------------------------------------|----------|
| Savneet Singh        | Trust and Safety, AI Ethics          | LinkedIn message, <a href="https://www.linkedin.com/in/savneetsingh1">linkedin.com/in/savneetsingh1</a> | Sept 24, 2026, 10:21 a.m. | Measuring Oversight and earlier work on the same gap | 1, 2     |
| Sanjeev Rao Ganjihal | AI Infrastructure Builder, AI Ethics | LinkedIn message, <a href="https://www.linkedin.com/in/sanjeevg89">linkedin.com/in/sanjeevg89</a>       | Sept 24, 2026, 10:23 a.m. | Measuring Oversight and earlier work on the same gap | 3, 4     |

## Order of publication (earliest first)

| Date          | Author             | Work                                                                                                                                                                                                                                                                           | Evidence of date                                                                                                                                                             |
|---------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sept 23, 2025 | Puglisi            | Checkpoint-Based Governance: An Implementation Framework for Accountable Human-AI Collaboration. Names automation bias drift, "where humans progressively defer to AI recommendations without critical evaluation," as one of three critical failures the framework addresses. | <a href="https://basilpuglisi.com">basilpuglisi.com</a> page, with metadata showing publication on Sept 23, 2025 and last modification on Oct 18, 2025.                      |
| Sept 28, 2025 | Puglisi            | The Human Enhancement Quotient: Measuring Cognitive Amplification Through AI Collaboration, first version.                                                                                                                                                                     | GitHub basilpuglisi/HAIA, <a href="https://github.com/basilpuglisi/HAIA/commit/b5f18a06c1fce297b37a741329a28642a1cd33a2">commit b5f18a06c1fce297b37a741329a28642a1cd33a2</a> |
| Feb 3, 2026   | Puglisi            | HAIA-RECCLIN Agent Architecture Specification v1.6, Autonomous Agent for Audit-Grade Multi-AI Collaboration. Its Automation Bias Detection provision flags potential automation bias "if the human approves everything without modification."                                  | GitHub basilpuglisi/HAIA, <a href="https://github.com/basilpuglisi/HAIA/commit/d8cc73a05fb47b491b96fdbf7b3fb435188fd80f">commit d8cc73a05fb47b491b96fdbf7b3fb435188fd80f</a> |

## Record notes

The LinkedIn conversations with each recipient remain the primary record of both messages. The screenshots capture the opening and the close of each message as sent, and the middle of each message falls between the two captures.

Each source file name begins with a number that reads as a Unix timestamp in milliseconds, and the four decode to between 14:21:50 and 14:23:41 UTC on September 24, 2026, which is 10:21 to 10:23 a.m. Eastern Time.

GitHub commit hashes carry the dates for files in the basilpuglisi/HAIA repository. Each cited file shows a single commit on the main branch, so its content is unchanged since upload. The Checkpoint-Based Governance page carries publication metadata of September 23, 2025 and a last modification of October 18, 2025, and both dates precede the June 2026 framework paper.
